Zero-inflated Poisson regression

Though we can run a Poisson regression in R using the `glm` function in one of the core packages, we need another package to run the zero-inflated poisson model. We use the pscl package.

```
summary(m1 <- zeroinfl(count ~ child + camper | persons, da
```

Zero-inflated Poisson regression

```
## 
## Call:
## zeroinfl(formula = count ~ child + camper | persons, dat
## 
## Pearson residuals:
##    Min     1Q  Median     3Q    Max
## -1.237 -0.754 -0.608 -0.192 24.085
```

Zero-inflated Poisson regression

```
## Count model coefficients (poisson with log link):
##              Estimate Std. Error z value Pr(>|z|)
## (Intercept)   1.5979     0.0855    18.68   <2e-16 ***
## child        -1.0428     0.1000   -10.43   <2e-16 ***
## camper1       0.8340     0.0936     8.91   <2e-16 ***
```

Zero-inflated Poisson regression

```
## Zero-inflation model coefficients (binomial with logit ]
##             Estimate Std. Error z value Pr(>|z|)
## (Intercept)    1.297      0.374    3.47  0.00052 ***
## persons       -0.564      0.163   -3.46  0.00053 ***

## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1
##
## Number of iterations in BFGS optimization: 12
## Log-likelihood: -1.03e+03 on 5 Df
```

Zero-inflated Poisson regression

▶ Below the model call, you will find a block of output
containing Poisson regression coefficients for each of the
variables along with standard errors, z-scores, and p-values for
the coefficients.

▶ A second block follows that corresponds to the inflation
model.

▶ This includes logit coefficients for predicting excess zeros
along with their standard errors, z-scores, and p-values.
